## PRODUCT STRUCTURE & PERFORMANCE DESCRIPTION

## Structure du produit et performance

### Couche décorative

La couche décorative possède une variété de tissus, incluant un film PP et un film PVC.

### 1. Decorative layer

The decorative layer has a variety of fabrics, including PP film, PVC film, PET film, metal film, water-based cross fabric base film, etc.

### Couche céramique en cristal

La couche céramique en cristal adopte un système de formule acrylique, ce qui confère une excellente dureté et résistance aux impacts.

### 2. Super hard crystal ceramic layer

The crystal ceramic layer adopts an acrylic formula system, which has excellent hardness and impact resistance.

### Couche de fibre de charbon de bambou

La couche de base est une couche de fibre de charbon de bambou, qui est un matériau synthétique composé de poudre de résine PVC, de poudre de charbon de bambou et de poudre de carbonate de calcium naturel.

### 3. Bamboo charcoal fiber layer

The core layer of the substrate is a bamboo charcoal fiber layer, which is a synthetic material of PVC resin powder, bamboo charcoal fiber powder, and natural calcium carbonate powder.

### Couche céramique en cristal

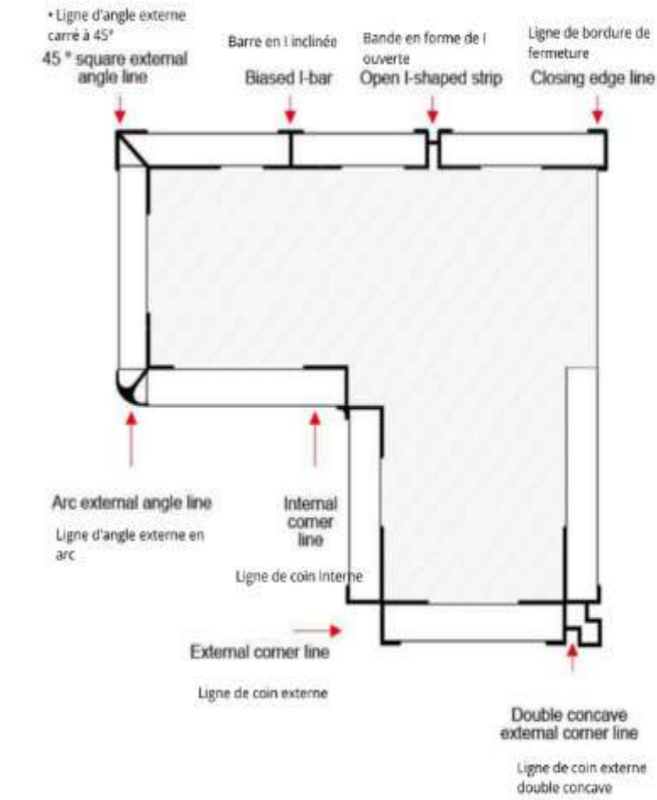

Cette couche céramique en cristal est la même que la deuxième couche et adopte un système de formule acrylique, formant une structure à trois couches avec une autre couche céramique en cristal et une couche de base.

### 4. Super hard crystal ceramic layer

This crystal ceramic layer is the same as the second layer and adopts an acrylic formula system, forming a three-layer structure with another crystal ceramic layer and core layer.

## INSTALLATION DISTRIBUTION DIAGRAM OF CARBON CRYSTAL PLATE

## DIAGRAMME DE DISTRIBUTION DE L'INSTALLATION DE LA PLAQUE DE CRISTAL DE CARBONE

Carbon crystal board is one of the most popular wall decoration materials at present, widely used in various commercial spaces, hotels, apartments, schools, hospitals, residences, and other engineering decoration fields. It has the following product characteristics:

1. Excellent product stability. The substrate of our carbon crystal board is a three-layer structure, with a crystal ceramic layer on the surface and bottom layer, and a bamboo carbon fiber layer in the middle core layer. The product with a three-layer structure has excellent stability and excellent deformation resistance.

2. Ultra high environmental performance. Our company uses environmentally friendly calcium zinc stabilizers throughout the production of carbon crystal plates, abandoning traditional lead salt stabilizers; The adhesive adopts imported PUR adhesive. Green and environmentally friendly, double canning!

3. The diversity of surface decoration materials. Our company has established a long-term and lasting cooperative relationship with excellent domestic wall fabric manufacturers, using traditional PVC film, PP film, PET film, leather, metal film, water-based cross fabric base film, and so on. In terms of visual presentation, it can be both plain and luxurious.

4. The diversity of processing and installation processes. Our company's carbon crystal board production has its own large-scale extruder, which is seamless from extrusion to flat pasting. We can also provide processing for the rear section, with large engraving machines and heavy-duty slotting machines, which can carve any size at will. We can also create double female grooves, male female grooves (flat buckles), male female grooves (lock buckles), natural U-seams, and other buckle types for carbon crystal plates. This greatly reduces the difficulty of installing the part and improves the effect presented during delivery.

Le panneau en cristal de carbone est l'un des matériaux de décoration murale les plus intéressants à l'heure actuelle.

Largement utilisé dans divers espaces commerciaux, maisons, hôtels, appartements, écoles, hôpitaux, résidences et autres domaines de décoration d'ingénierie.

Il présente les caractéristiques de produit suivantes :

- Excellente stabilité du produit. Nos panneaux est une structure à trois couches, avec une couche de céramique cristalline en surface et une couche de fibres de char cœur médiane. Nos panneaux présente une excellente stabilité et une excellente résistance à la déformation.

- Performance environnementale ultra élevée. Notre entreprise utilise des stabilisateurs de zinc calcium respectueux de l'environnement tout au long de la production les stabilisateurs traditionnels au plomb.

L'adhésif utilise un adhésif PUR importé. Vert et écologique .

-La diversité des matériaux de décoration de surface. Notre entreprise a établi une relation coopérative à long terme et durable avec d'excellents fabricants de tissu utilisant du film PVC traditionnel, du film PP, du film PET, du cuir, du film métallique, du film de base en tissu croisé à base d'eau, etc. En termes de présentation visuelle luxueux

- La diversité des processus de traitement et d'installation. La production de panneau en cristal de carbone de notre société dispose de sa propre extrudeuse à grande fabrication sans jointure de l'extrusion à la pose à plat.

- Nous pouvons également entailler n'importe quelle taille et pouvons également créer des rainures doubles femelles . Cela réduit grandement la difficulté d'installer présenté lors de la pose.
